SUMMARY

Backend Software Engineer with 5 years building production systems in PHP (Symfony, Zend, Swoole), Go and Python. I have direct experience in creating datasets for training AI models focusing on development. I have developed prompts for complex development-related problems, I developed structured datasets linked to specific themes that interacted with a set of APIs.

TECHNICAL SKILLS

- Backend: PHP (Symfony, Zend, Swoole), Go (Gin), Python, RESTful API design, gRPC, async processing
- Databases: MariaDB, PostgreSQL, Elasticsearch, SQL optimization, schema design
- Infrastructure: Docker, AWS (EC2), Linux server administration, CI/CD pipelines
- Tools: Git, Jira, AI-assisted development (Claude, ChatGPT)

WORK EXPERIENCE

Alignerr

Remote (USA)

Software Engineer – Backend Developer (Part-Time)

Feb 2026 – Present

- I led teams of 5 to 6 developers in creating datasets focused on specific themes that interacted with a set of APIs.
- Created high-quality datasets in PHP, Go, Python, and JavaScript used to train AI models in the software development domain, directly contributing to model accuracy improvements.
- Performed systematic review and validation of AI-generated code, providing structured feedback that improved output reliability and reduced error rates in subsequent model iterations.
- Engineered detailed, production-grade prompts used as training data for AI models, applying deep backend expertise to ensure technical accuracy and real-world applicability.

Segura

Remote

Software Engineer – Backend Developer (Full-time)

Jun 2021 – Feb 2026

- Developed an internal communication platform using PHP (Symfony) and MariaDB, adopted company-wide by all resellers, streamlining cross-team collaboration and reducing support overhead.
- Refactored an EPM/PEDM solution, redesigning the product database from 50+ tables down to 25 tables (50% reduction), significantly improving query performance and maintainability.
- Executed a migration from PHP 7.0 to PHP 8.1, modernizing the codebase with type safety and performance improvements while ensuring zero downtime during transition.
- Implemented Elasticsearch to handle product logs, making the logging system considerably faster.
- Integrated Swoole async runtime into the PHP backend, considerably increasing throughput capacity and enabling higher concurrent request loads without additional infrastructure.
- Built access control feature using Caitsith for granular permission management on remote Linux machines, enhancing security posture for enterprise customers.
- Developed database migration script successfully deployed by large enterprise customers, ensuring data integrity across schema versions with rollback support.

EDUCATION

UFES – Universidade Federal do Espírito Santo

Brazil

Bachelor's Degree in Computer Science

Graduated in 2025
